Closing prices of March 18, 2009

Stocks rallied broadly again Wednesday, nearly recording a fourth panic-buying 90% up day after the three since March 10<sup>th</sup>. Nine of the ten S&P sectors traded higher led by Financials +10.10% with Consumer Staples the laggard -0.52%. As we said yesterday, buyers keep buying the dips in spite of an extreme overbought condition, and sellers are nowhere to be found. Stocks remain extremely overbought, and options buyers are very optimistic, so we repeat our comment that long-term investors should be careful with entry points long, and aggressive short-term traders can look for shorting opportunities. Short sellers should only look for small gains at this point. This market may warrant the opposite of our warnings the last few months about extreme oversold markets that don't respond to oversold conditions being dangerous. An extremely overbought market that doesn't pull back may be the initiation phase of a strong rally.

**The short-term trend is now up, while the intermediate-term and long-term trends remain down. This continues to be an opportunistic trader's market, with adept traders able to take advantage long or short. Traders should not hesitate to rotate out of lagging sectors and stocks and into leaders.**
